

1. Go back to your `ListOfBooks` class from Lab 5b and rename the `deleteMostRecent` member function to `deletefromBack`. Then add the following member functions to the `ListofBooks`:
 - a. `bool insertFront(int, string);`
 - b. `bool deleteFront();`
 - c. `bool deleteBook(int isbnToDelete);`
 - d. `bool findBook(int isbn);`
 - e. copy constructor
 - f. overloaded `=` operator
 - g. `displayList(ostream&) const`
 - h. Then add an overloaded stream insertion operator `<<` to work with `ListofBooks` objects

```
friend ostream& operator<<(ostream &, const ListofBooks &);
```
2. Implement a main function (in a separate source.cpp file) to test your new `ListofBooks` class functionality.
