

From Lab 3 Part B review your own vector class [MyIntVector](#) and add:

- a copy constructor and
- an overloaded assignment operator=

Task 1 Write a main program ([source.cpp](#)) to test that your copy constructor and assignment operator= make deep copies. Upload your code.

Discussion Task 1: For this task you will submit a short video (5 mins max) explaining the Rule of Five using your MyIntVector class as an example.

Note: The max upload 50MB so as I cannot receive .zip or large attachments by email you may need to use a free video compression program to make your video smaller for Moodle upload. For example, “any video converter” <https://www.any-video-converter.com/products/video-converter-free/>
